& Modelling

Systems Design

# Science and Technology

Science and Technology is a compulsory Area of Learning at Key Stage 3. This Area of Learning aims to stimulate pupils' curiosity, enthusiasm and innovation.

Schools can choose to organise pupils' learning in Science and Technology by:

- teaching the subject strands together;
- connecting learning in the subject strands; and/or
- teaching the subject strands separately.

If schools teach Science, and Technology & Design as separate subject strands, they should make connections in Science and Technology.

# Creativity and Problem-solving

## Post-Primary

- NI Curriculum: Thinking Skills and Personal Capabilities
- Creativity and Problem-Solving Strategies
- Teaching and Learning Activities

# Technology & Design

In Technology & Design, pupils learn about:

- Design
- Communication
- Manufacturing
- Control

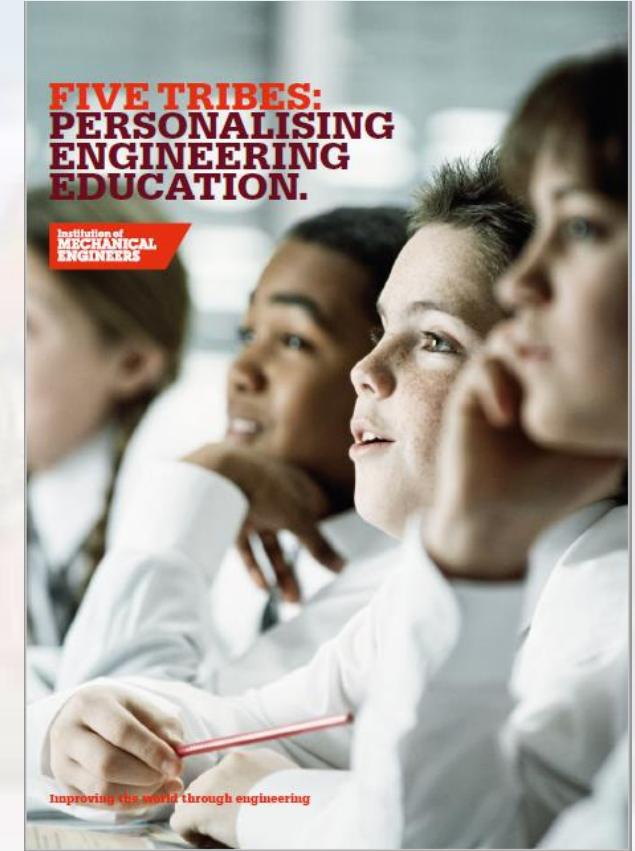

# Technology & Design

- Technology & Design encourages pupils to develop creative thinking and problem-solving skills by evaluating design proposals and selecting and using materials that are fit for purpose
- Pupils should have opportunities to research and manage information effectively to investigate design issues. They should also think critically and flexibly, and demonstrate creativity and initiative when developing ideas and following them through

The messages focusing on what pure scientists and engineers 'do', are NOT sufficient to persuade the under-represented groups...Careers from STEM need to be described in terms of the personal characteristics required

The research raises questions about whether we should replace the current 'be like me' approach, with programmes that take difference into account. It compels us to explore how it might be possible to retain the creative talents and innovative abilities of many young people who do not fit the obvious engineering archetype

# Engineering & Gender

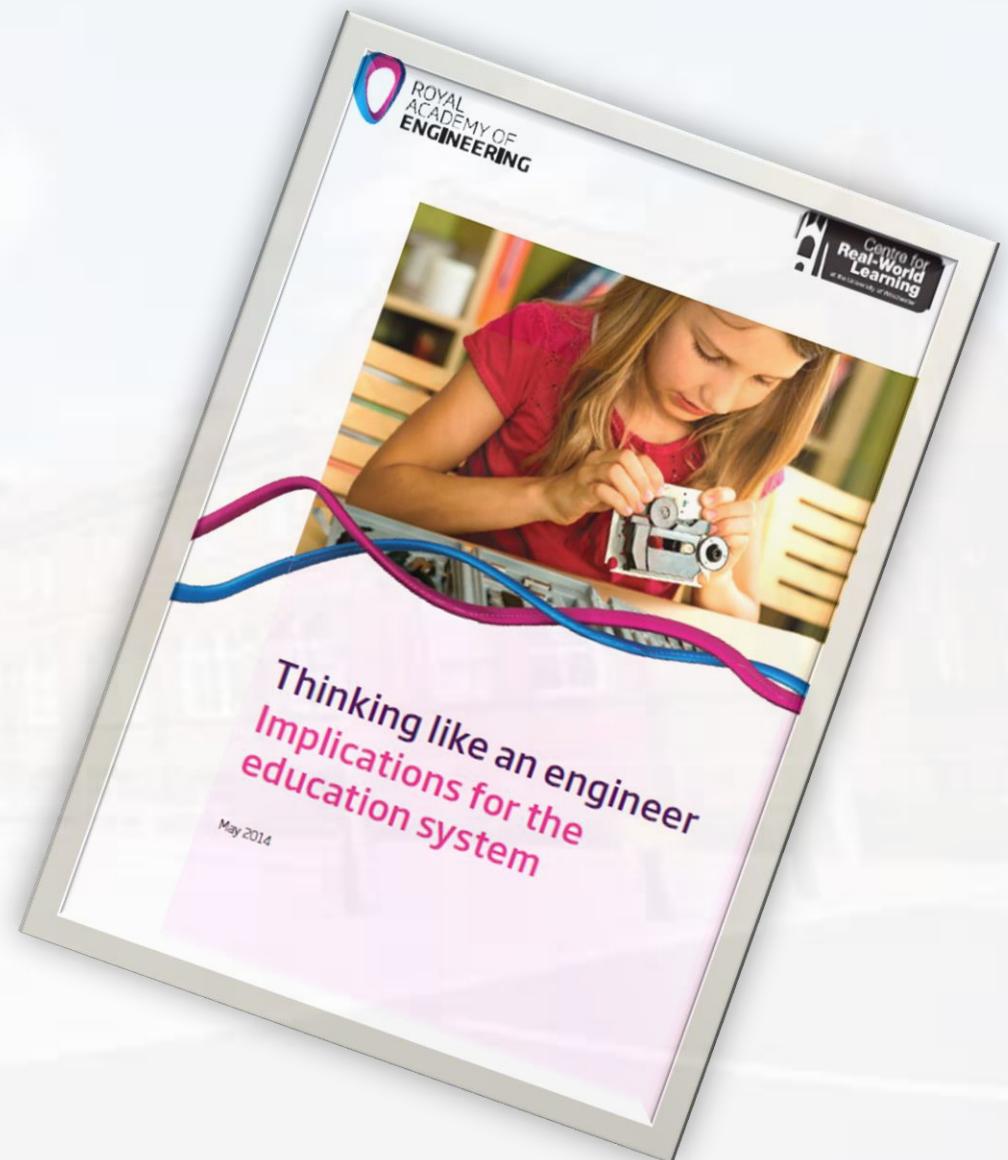

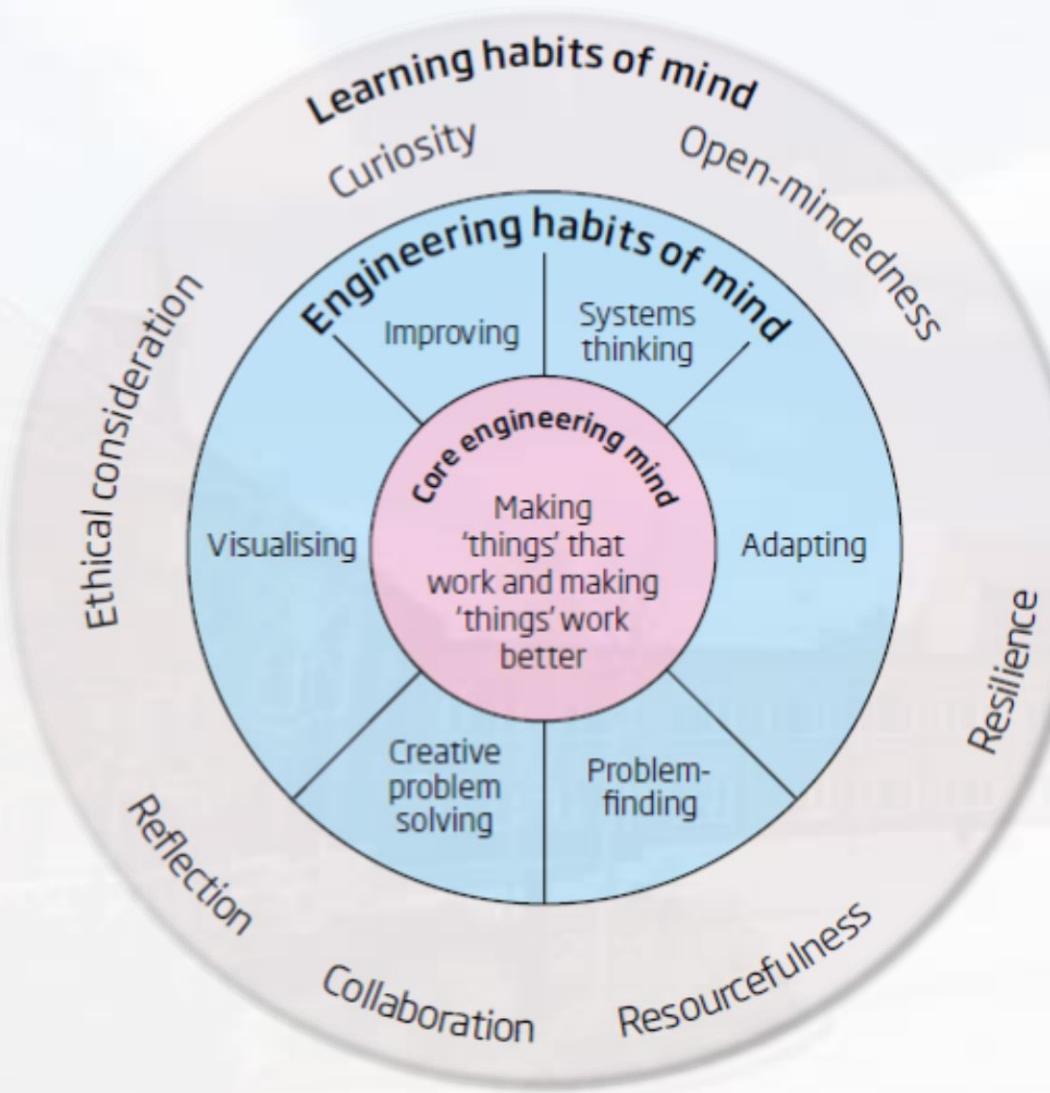

- Engineering as a **people focused**, problem-solving, socially beneficial discipline
- Shift the emphasis in STEM teaching towards **problem-based**, contextualised learning
- Nurture engineering ways of thinking in terms of **habits of mind**
- Create more spaces and opportunities for young people to design and make things particularly by **working collaboratively** in interdisciplinary groups
- Use Technology and Design as a platform for **integrating STEM** and creative design and for raising the profile of engineering in schools
- Change the structure of schools education to **embed engineering explicitly** at all levels, aimed at increasing their understanding of modern engineering

# How to Embed Creativity in STEM Education

- Recognise the value of Creativity to STEM Education
- Potential for inclusive classroom building empathy, collaboration and focus on improvement of peoples lives
- Potential to promote self-efficacy and wellbeing, by fostering the ability to generate creative ideas
- Enable pupils to make connections between learning
- Value and apply Subject Knowledge

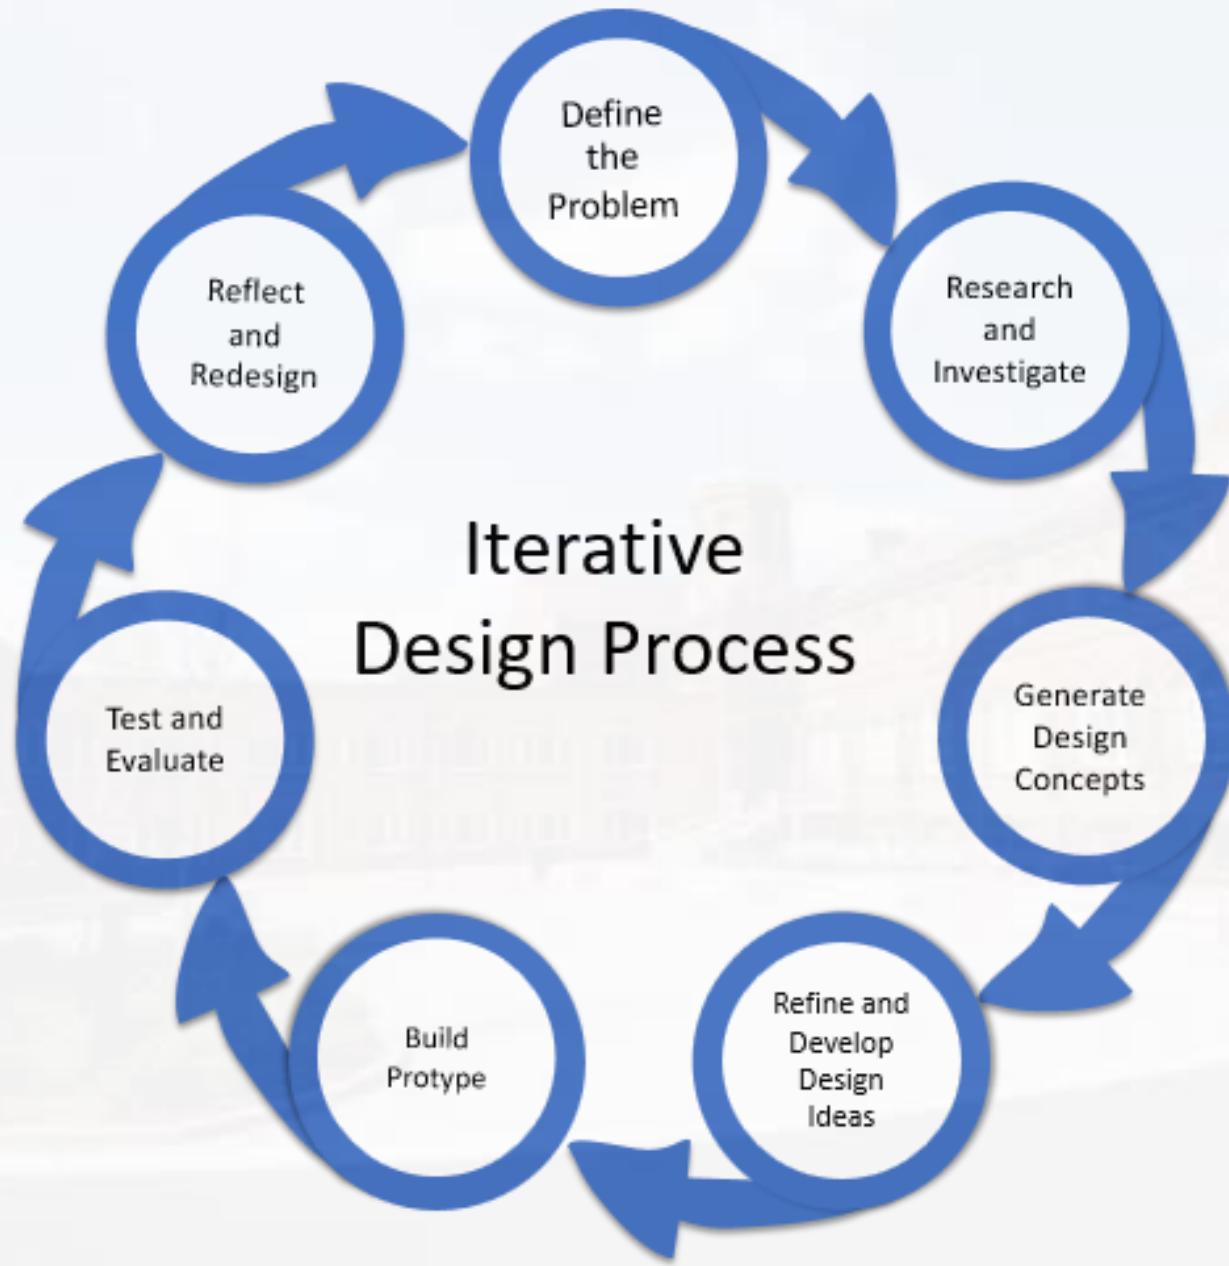

# Creativity

- Creativity involves the generation of new ideas that have value
- It involves looking at familiar things with a fresh eye, examining problems with an open mind, making connections, learning from mistakes and using imagination to explore new possibilities
- Designers synthesise what they have learned and apply to new and different situations

# Problem-Solving

- A problem is a situation that requires resolution with no immediate or apparent solution
- Problem-solving is a process
- It is a means to use previously acquired knowledge skills and understanding to satisfy the demands of an unfamiliar situation
- Pupils must synthesise what they have learned and apply to a new and different situation
- Problem-solving can promote practice in heuristic thinking

# Knowledge and Skills

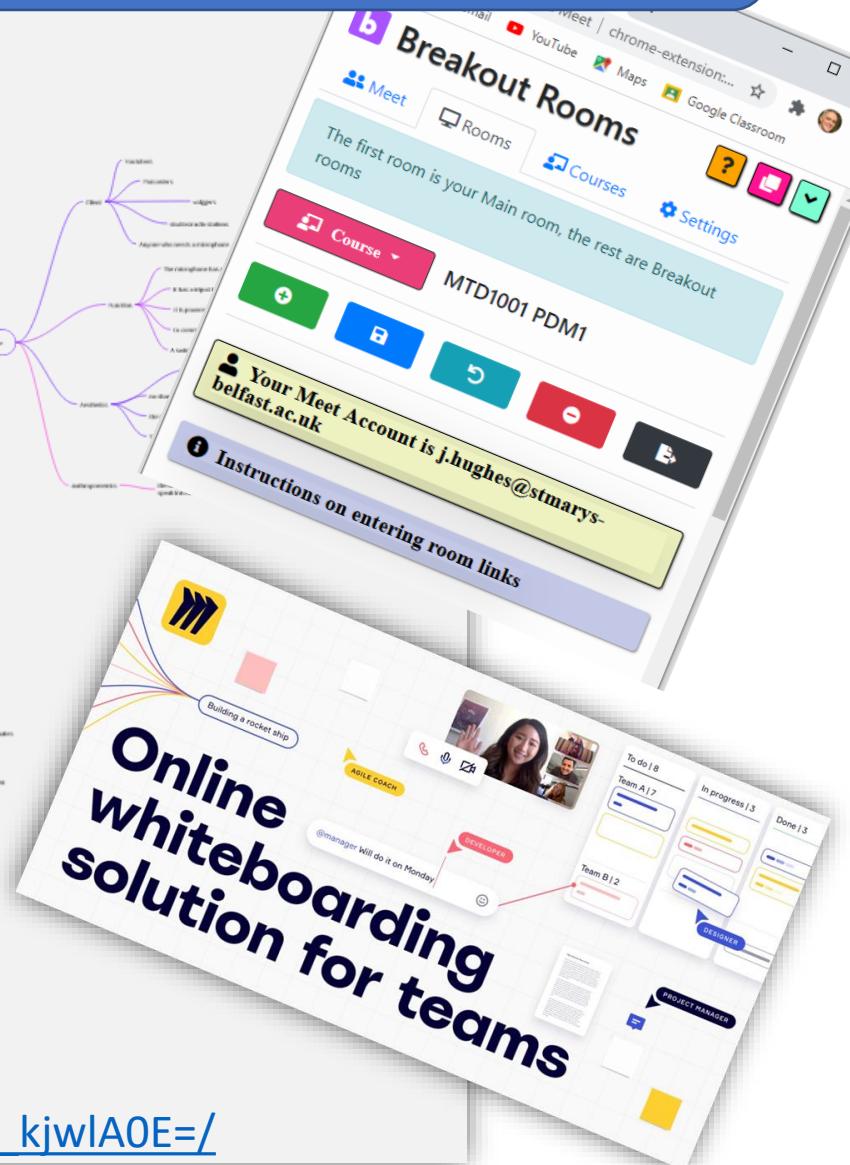

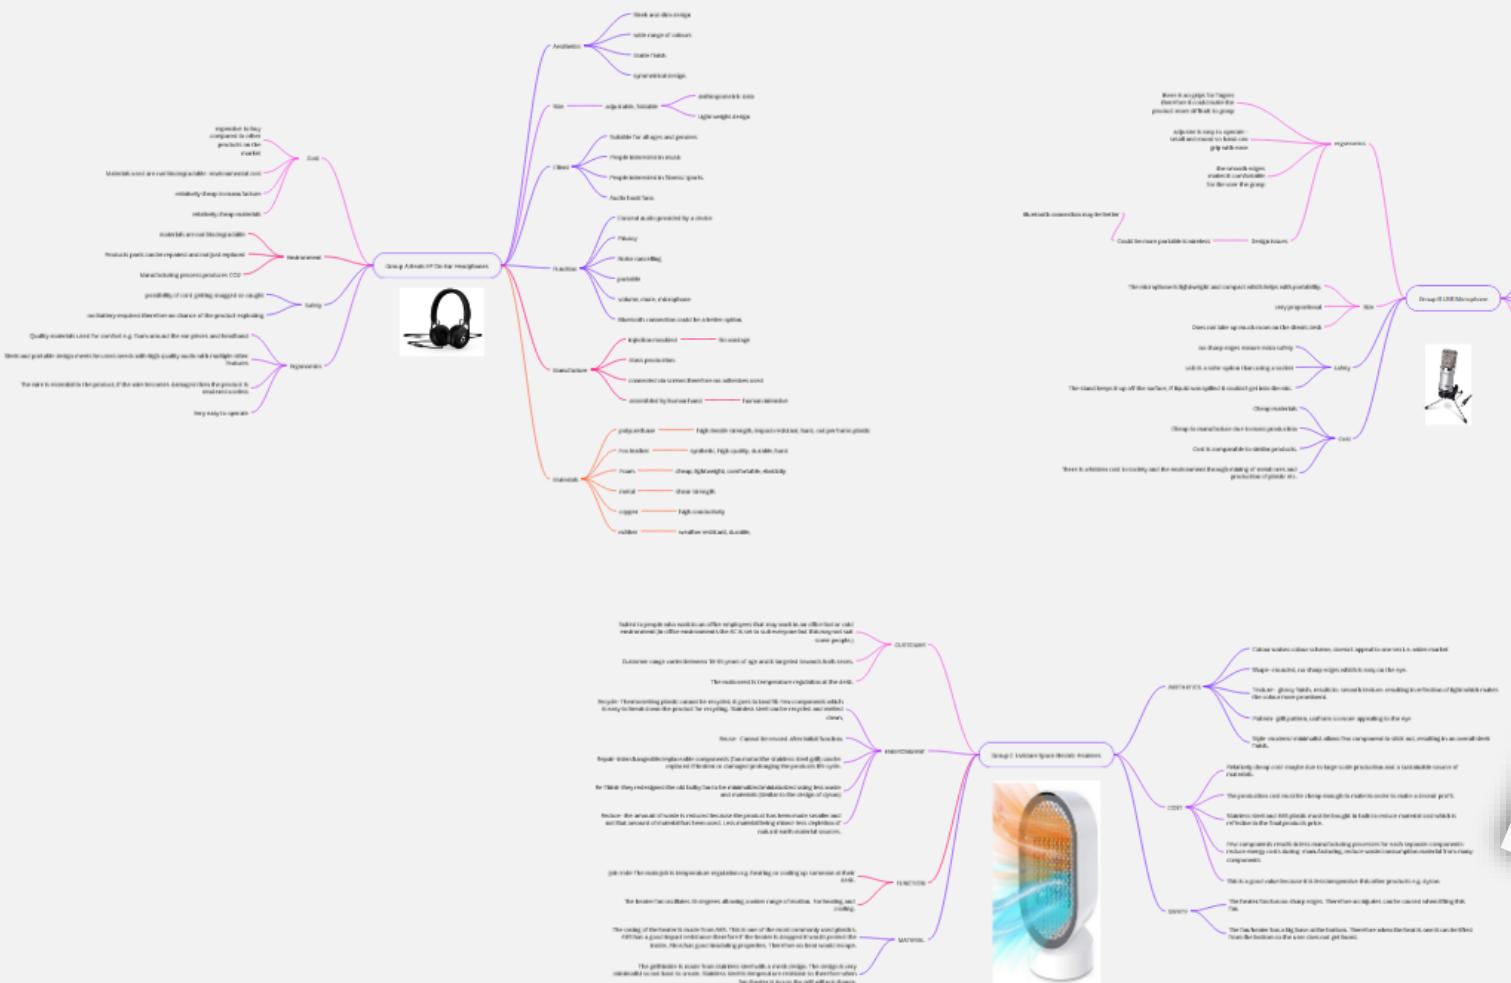

- Design skills- researching, investigation planning, sketching modelling
- Systems and control
- Visualising
- Communication

# Learning Experiences that Promote Inclusive STEM Education

- Creativity and problem solving pedagogy
- Inclusive classroom
- Project Based Learning
- Collaboration
- Knowledge and Skills
- Connections to community, industry and design based careers

# Build Collaborative Experiences

# Reflective Practice in STEM Education

## Technology & Engineering

## Develop Design Skills

Initial concept design sketches should include crating techniques and use of construction lines to promote flowing lines and cohesion in concept creation

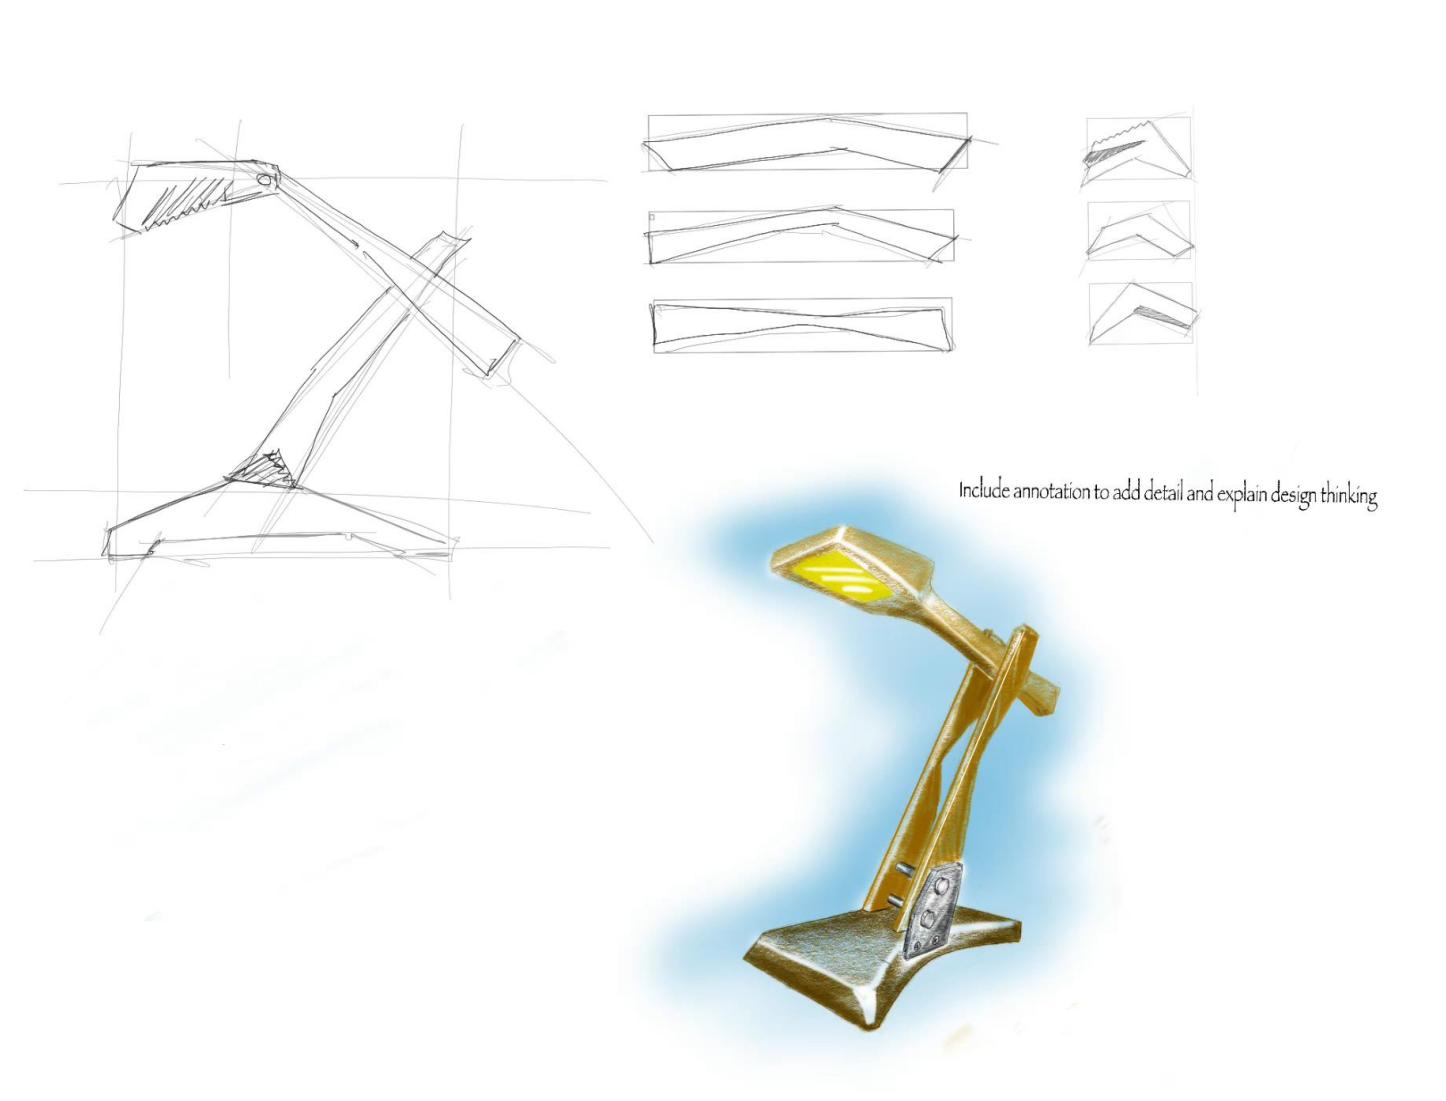

2D SKETCHING

Design Iteration

Design Visualisation in perspective/ Isometric

Render images taking account of light direction material and surface finish

Annotation to clarify design detail

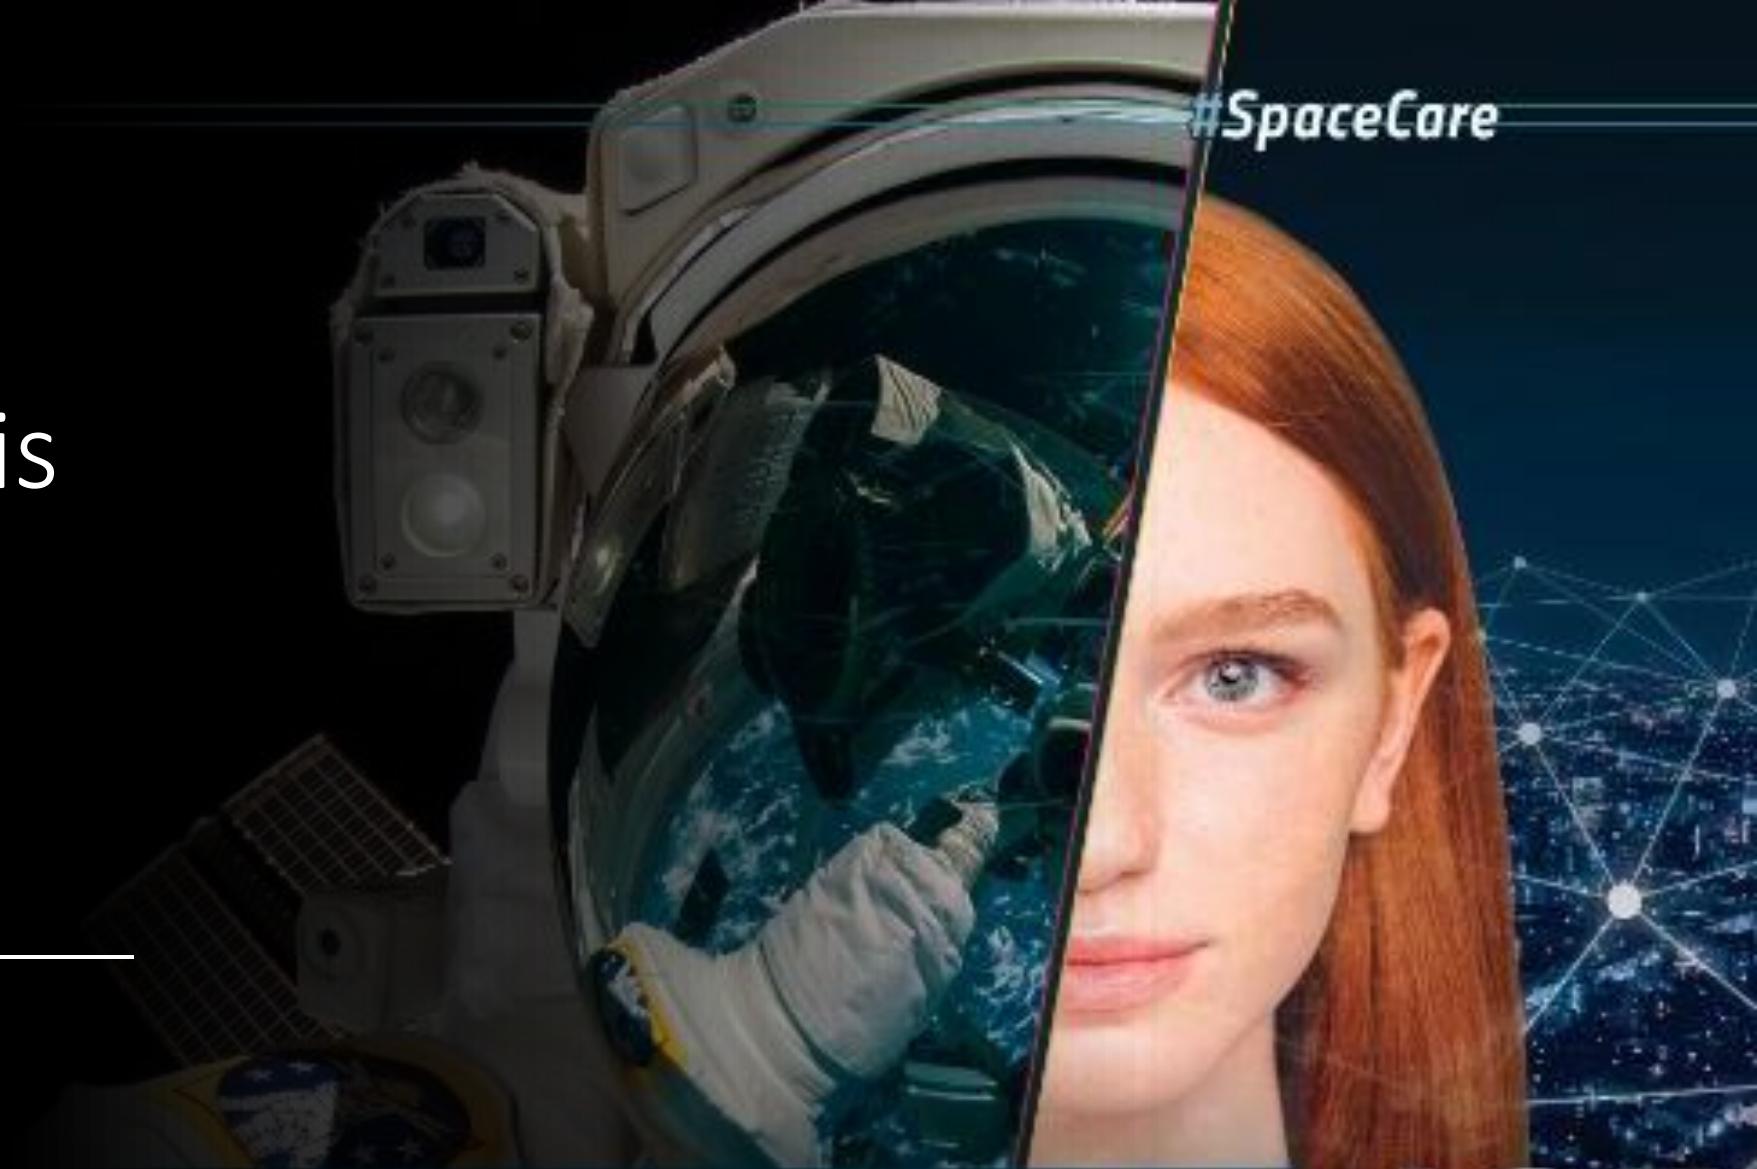

#SpaceCare

The European  
Space Agency is  
hiring for the  
first time in 11  
years

# Coffee Break Design Challenge

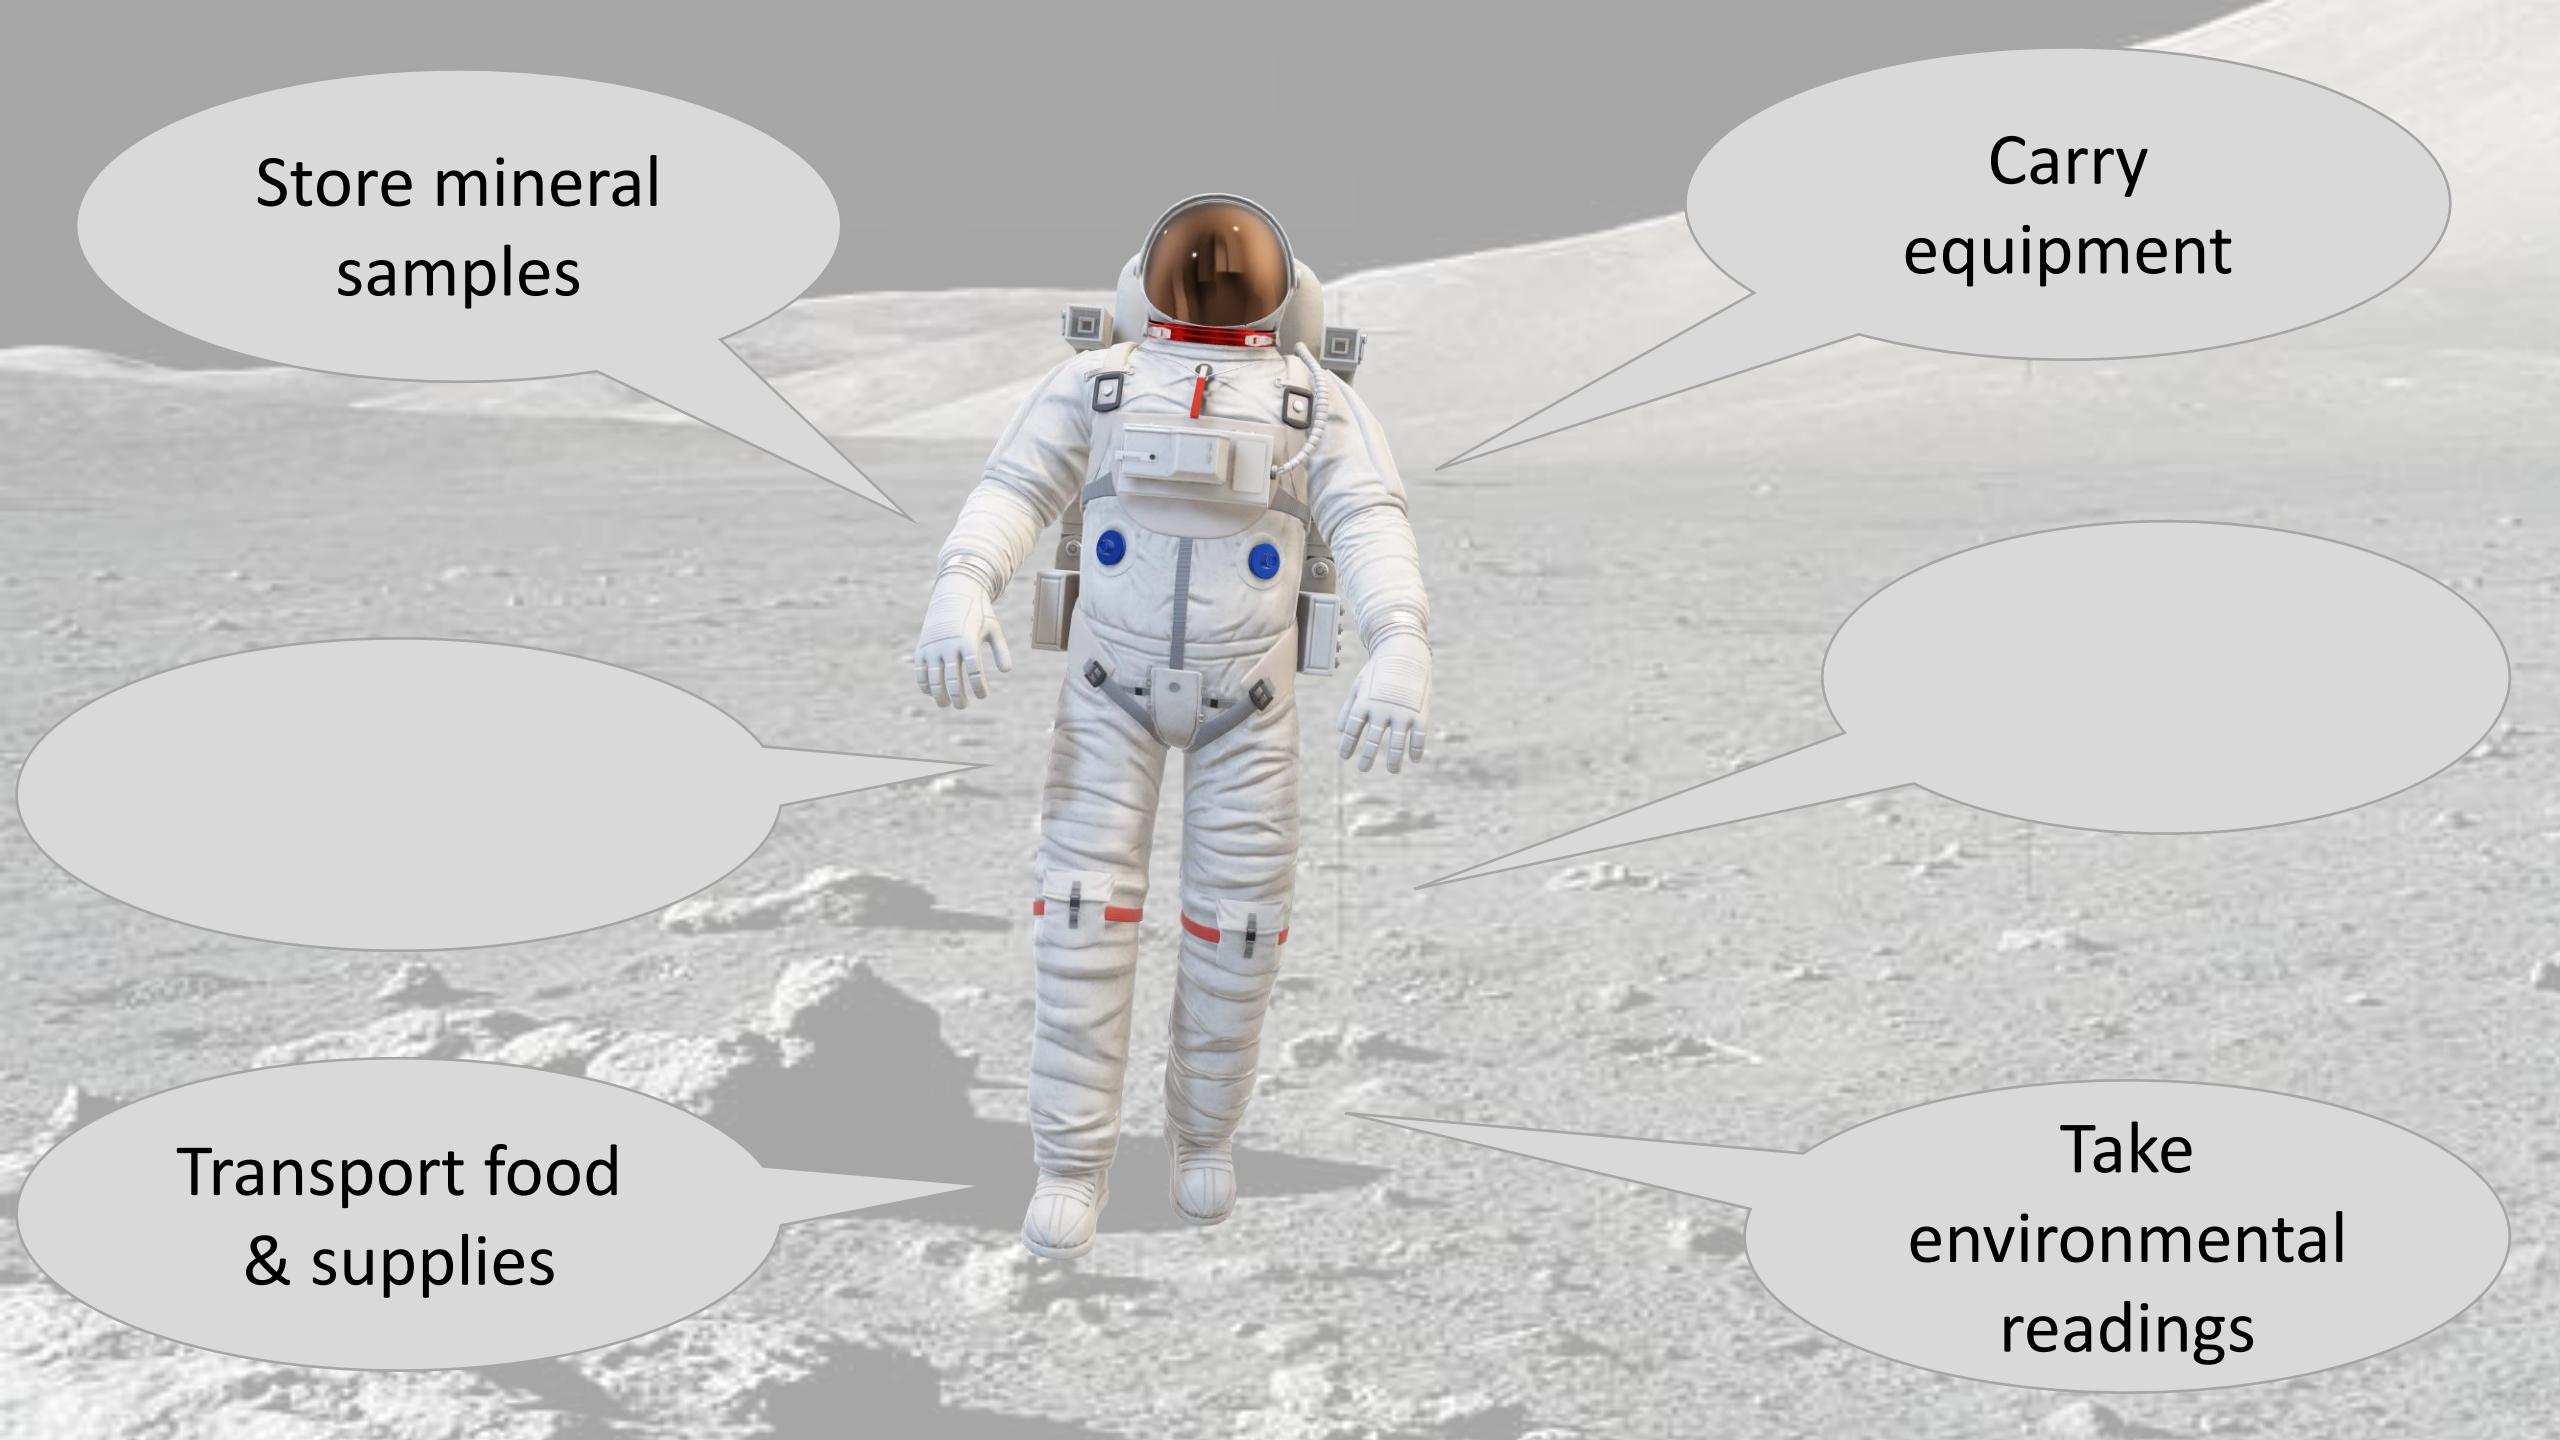

# Design Challenge

---

As astronauts prepare for missions to other planets, consider how robots could assist initial exploration and the work of these scientists and engineers

Store mineral samples

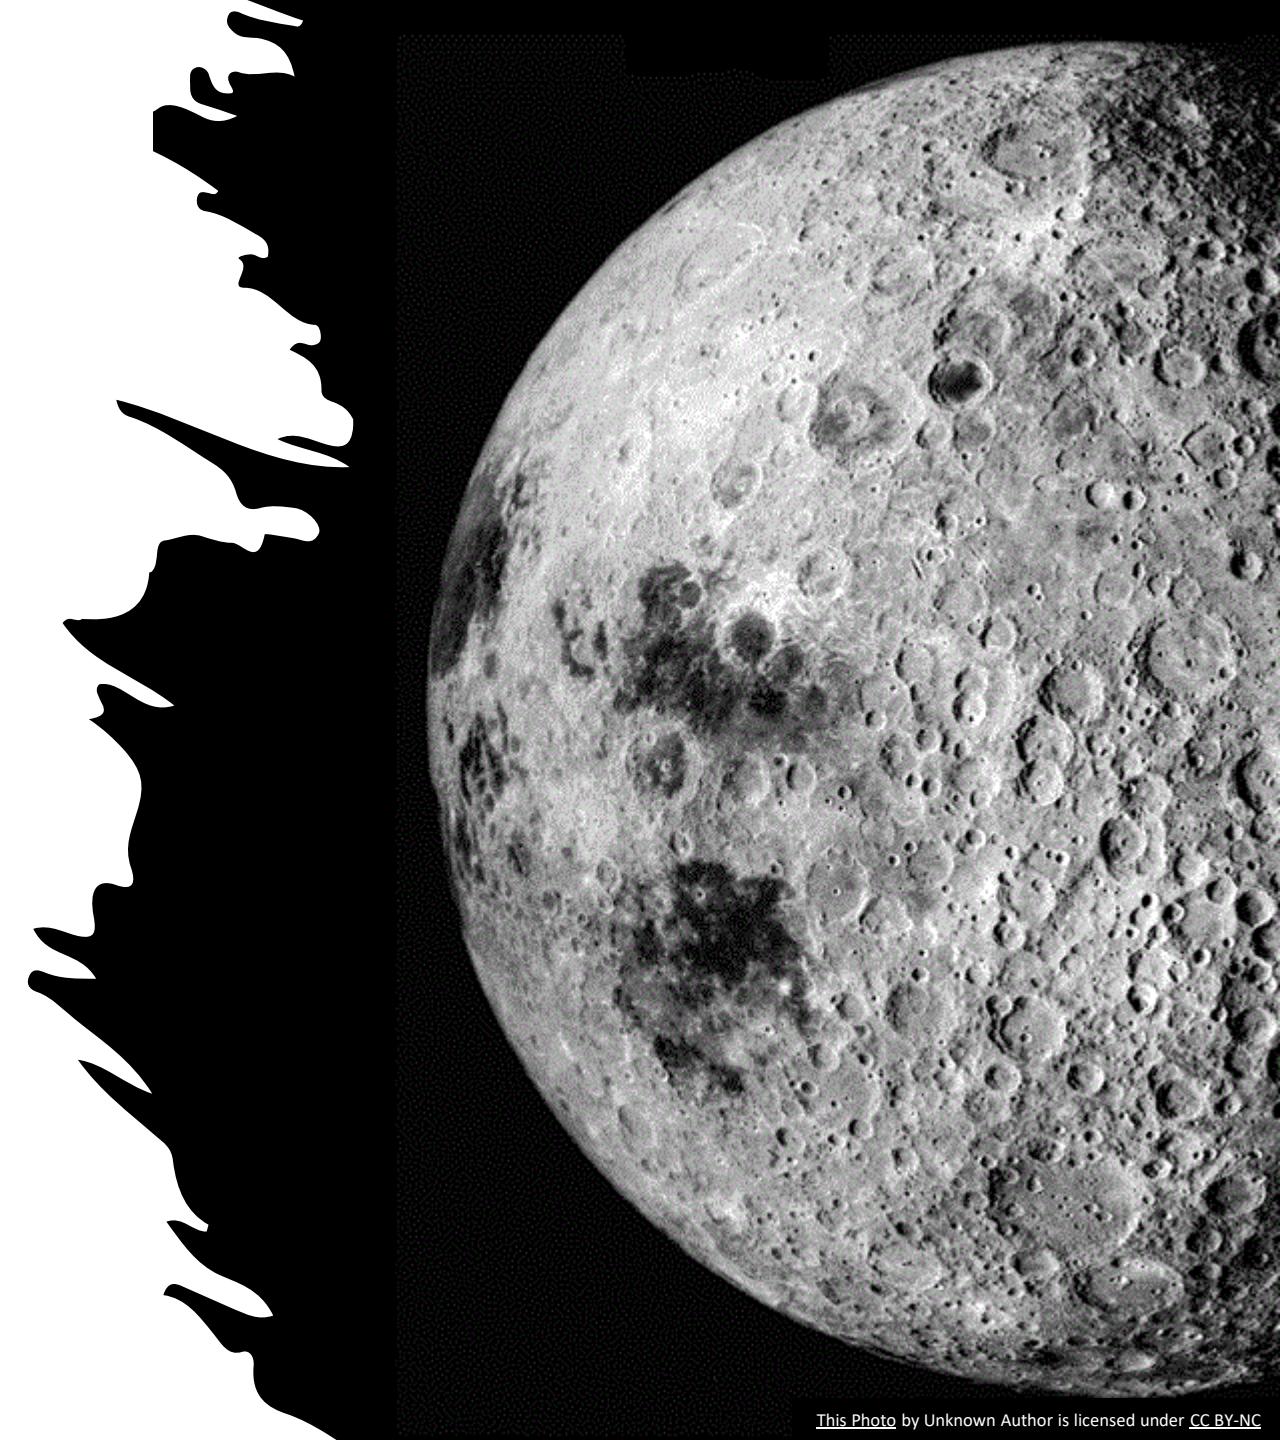

Carry equipment

Transport food & supplies

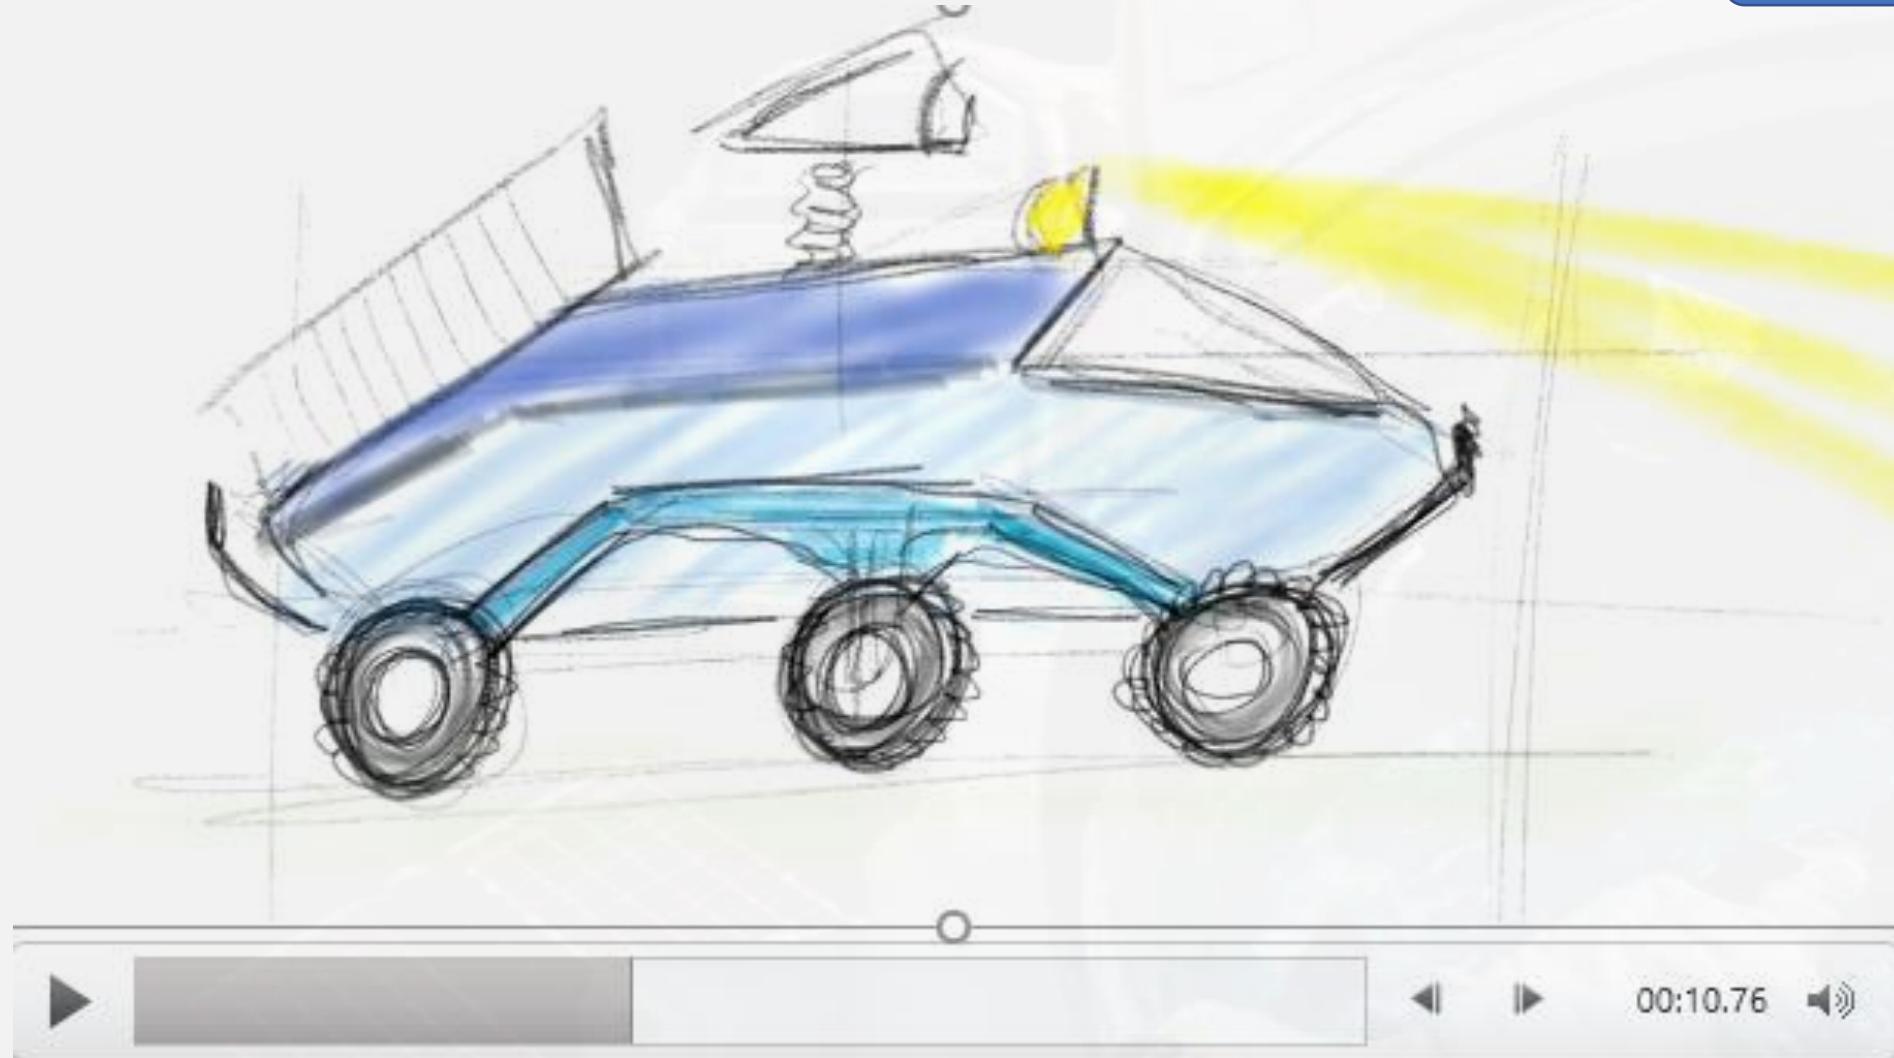

Take environmental readings

# Design Challenge

Design an assistance robot to help astronauts in this harsh environment

Sketch a design for an assistance robot

# Coffee Break Design Challenge

Take a photo of your sketch and email the picture of your robot design and I will return a PowerPoint gallery of the design work to the group

## Technology & Engineering

Concepts

Logic  
predicting & analysing

Algorithms  
making steps & rules

Decomposition  
breaking down into parts

Patterns  
spotting & using similarities

Abstraction  
removing unnecessary detail

Evaluation  
making judgement

The Computational Thinker:  
Concepts & Approaches

Tinkering  
experimenting & playing

Creating  
designing & making

Debugging  
finding & fixing errors

Persevering  
keeping going

Collaborating  
working together

Approaches

# Robotics

Robotics can address computational thinking which involves children developing and using a number of concepts and processes including:

- predicting and analysing
- devising steps and rules
- breaking down a problem into parts
- patterns and generalisations
- removing unnecessary detail
- evaluation

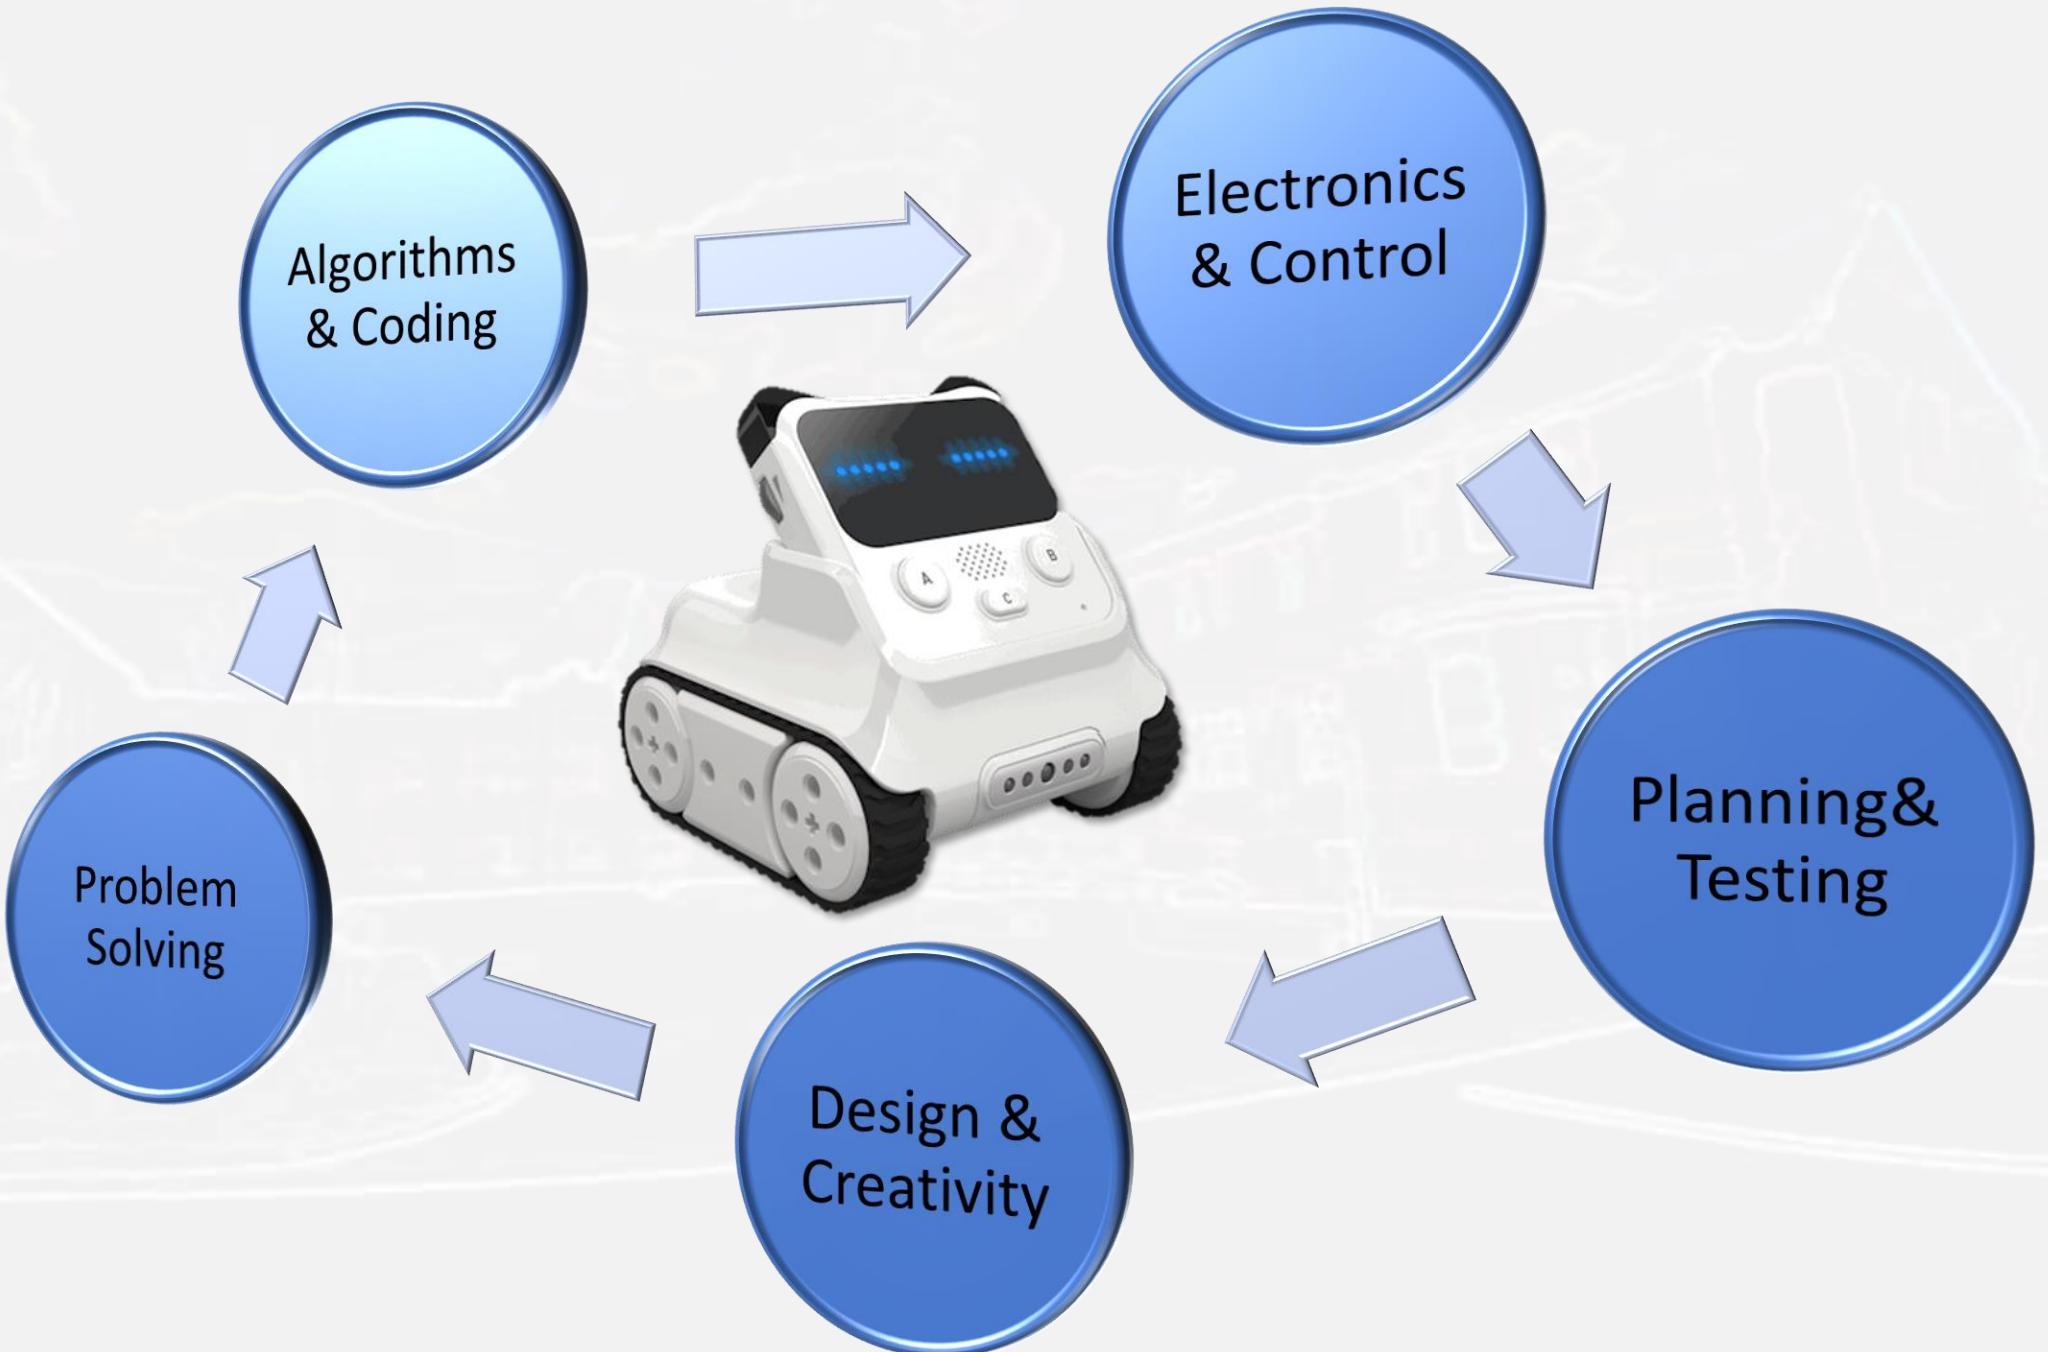

# Robotics and STEM Activities

- The goal is to integrate STEM activities in a meaningful way
- Address problems and understand the technological world around them
- Allows learners to engage in worthwhile problem solving
- Offers a bridge between maths, engineering, science and technology
- The approach promotes collaborative learning through experiential learning

# Coding Robots

- Developed approach
- Hardware updated
- Bluetooth communication
- Tablet based programming
- Rugged & Rechargeable
- Utilise Blockly coding which is Open Source ,scalable and expandable

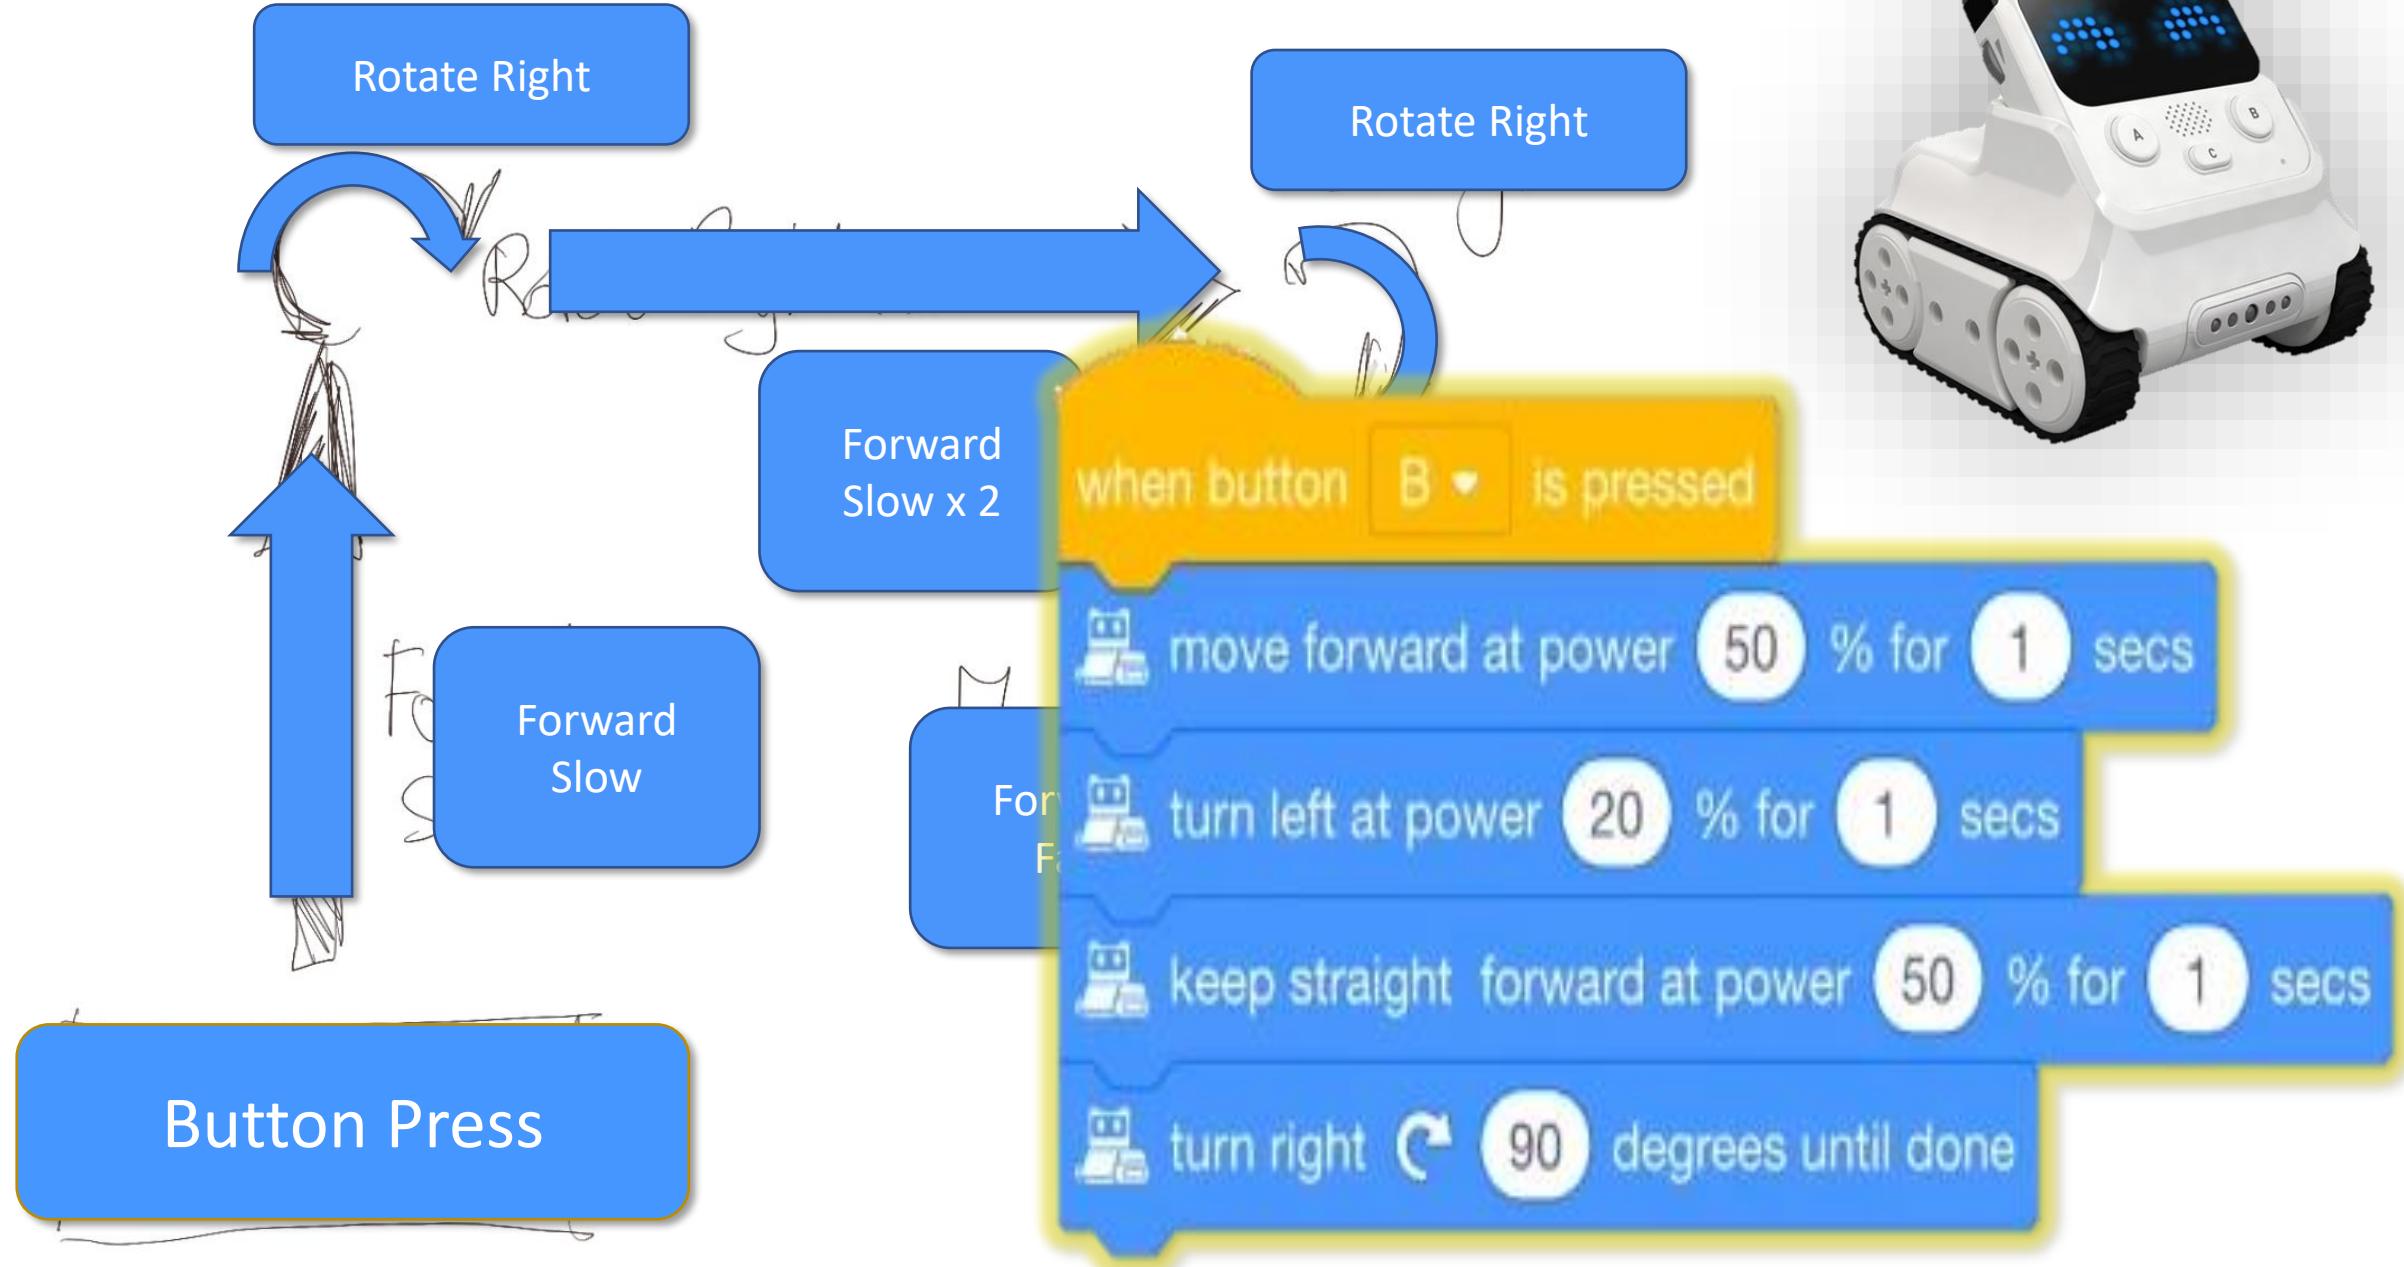

# Activity Two: Following a Path

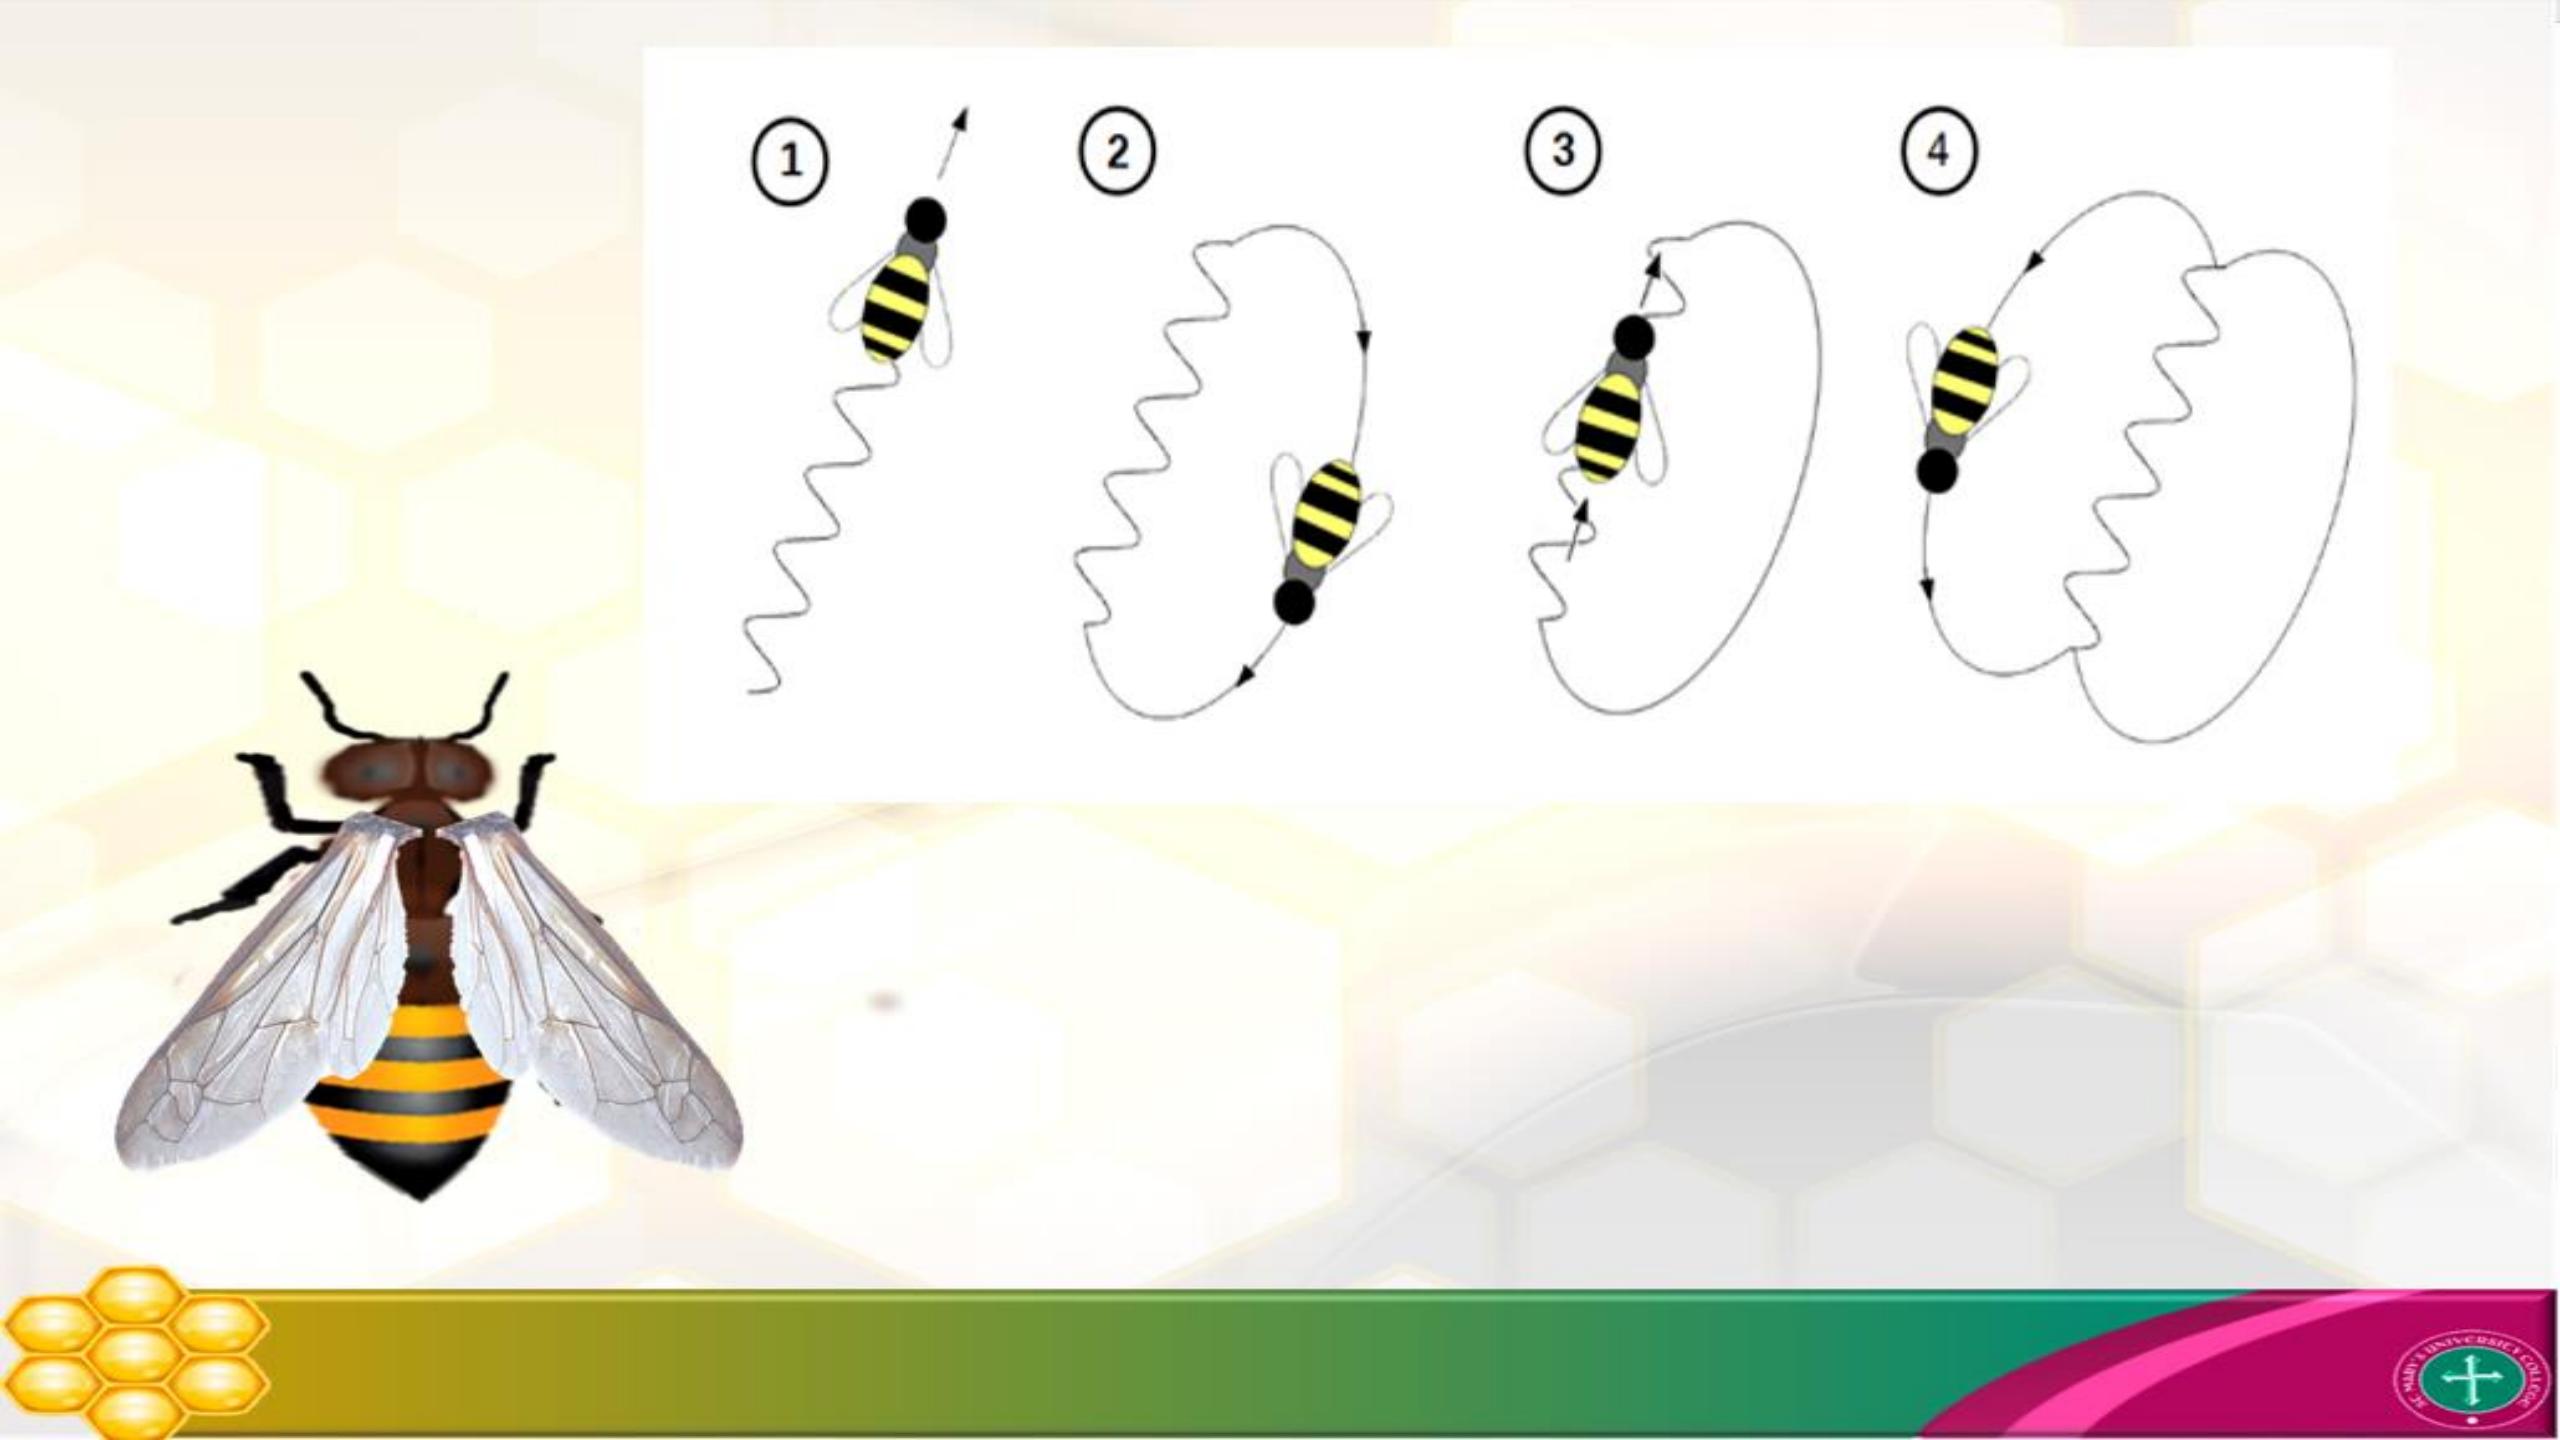

Design a path and Algorithm to:

- Respond to a Button Press
- Move forward a for a short distance
- Change direction
- Move forward a for a short distance

Sketch simple Path below and use MBlock command to create program

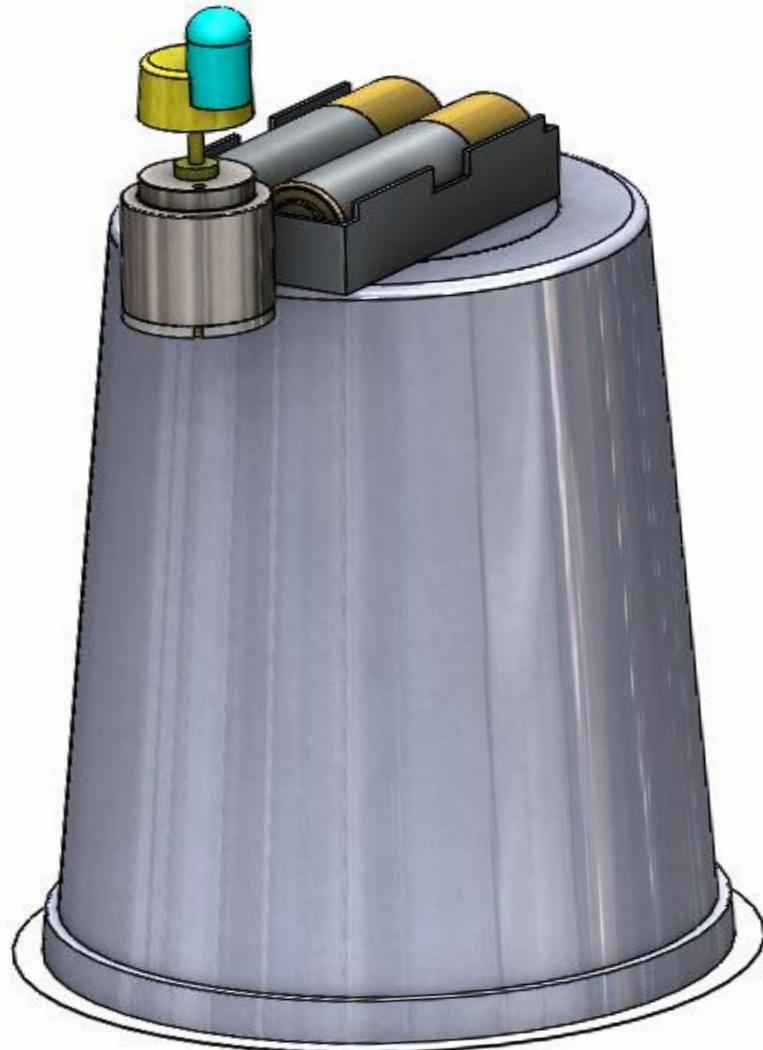

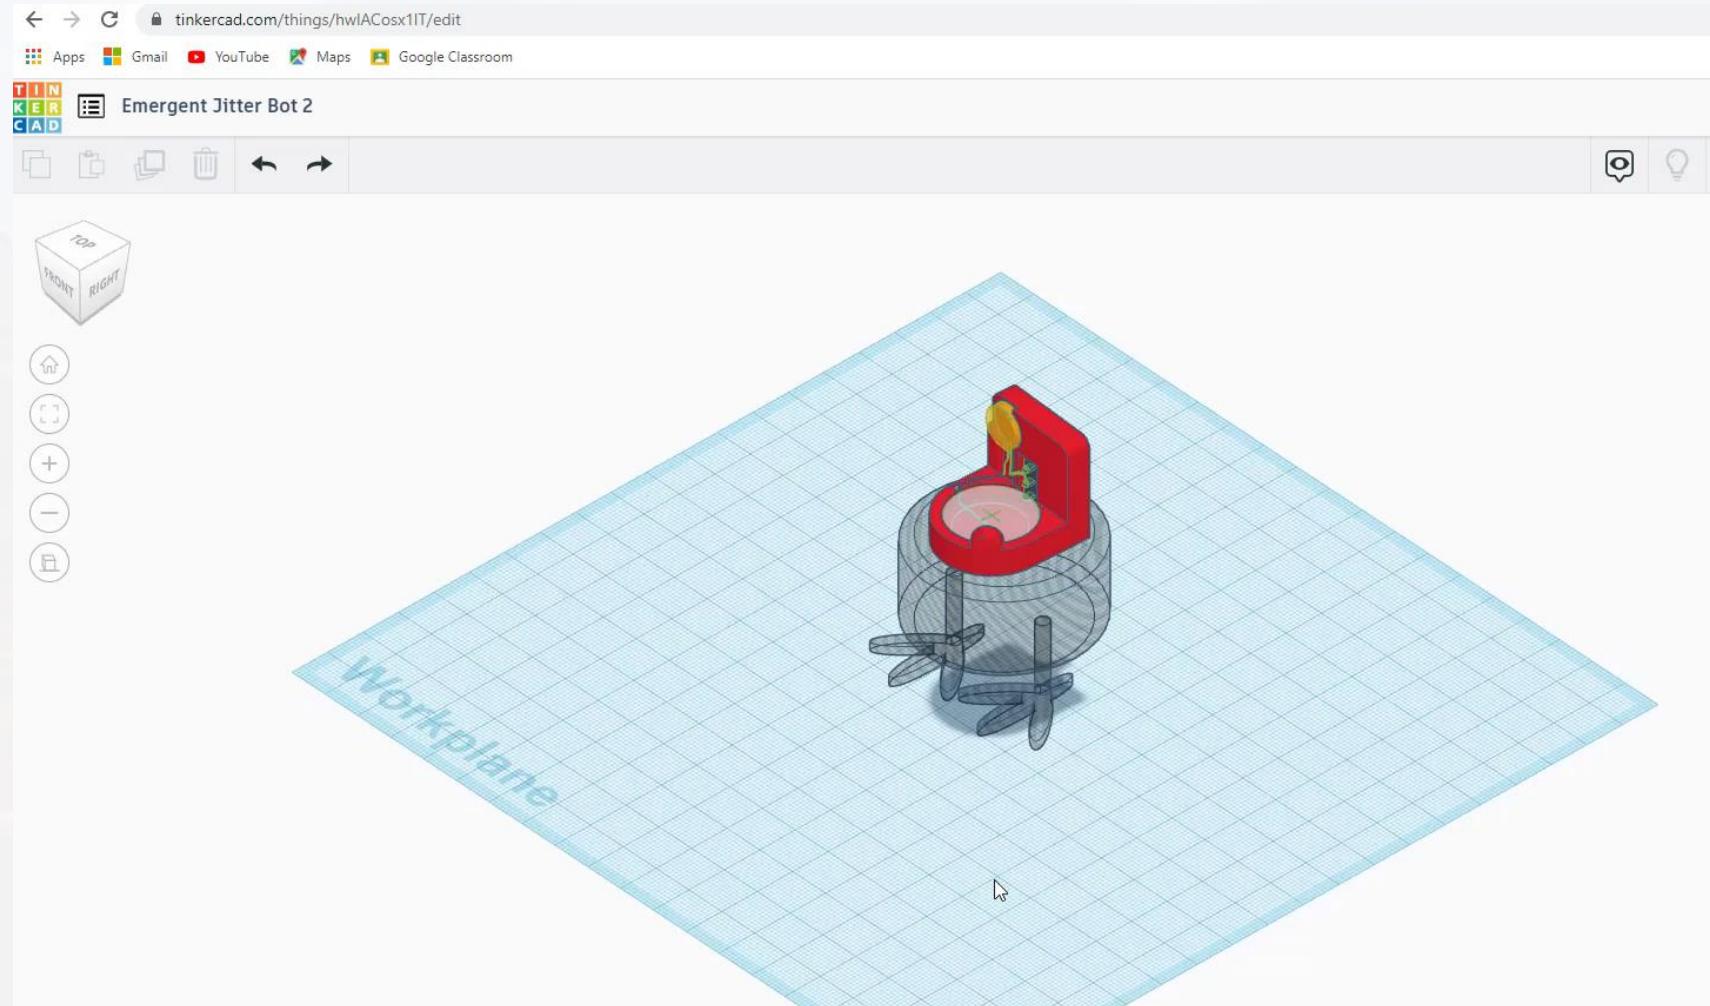

Making Activity

# Electronics & Coding

A screenshot of the Scratch 3.0 interface. The stage area is visible at the bottom. The script editor on the left shows a script for a 'PotPIN' sprite. The text editor on the right contains the following Arduino code:

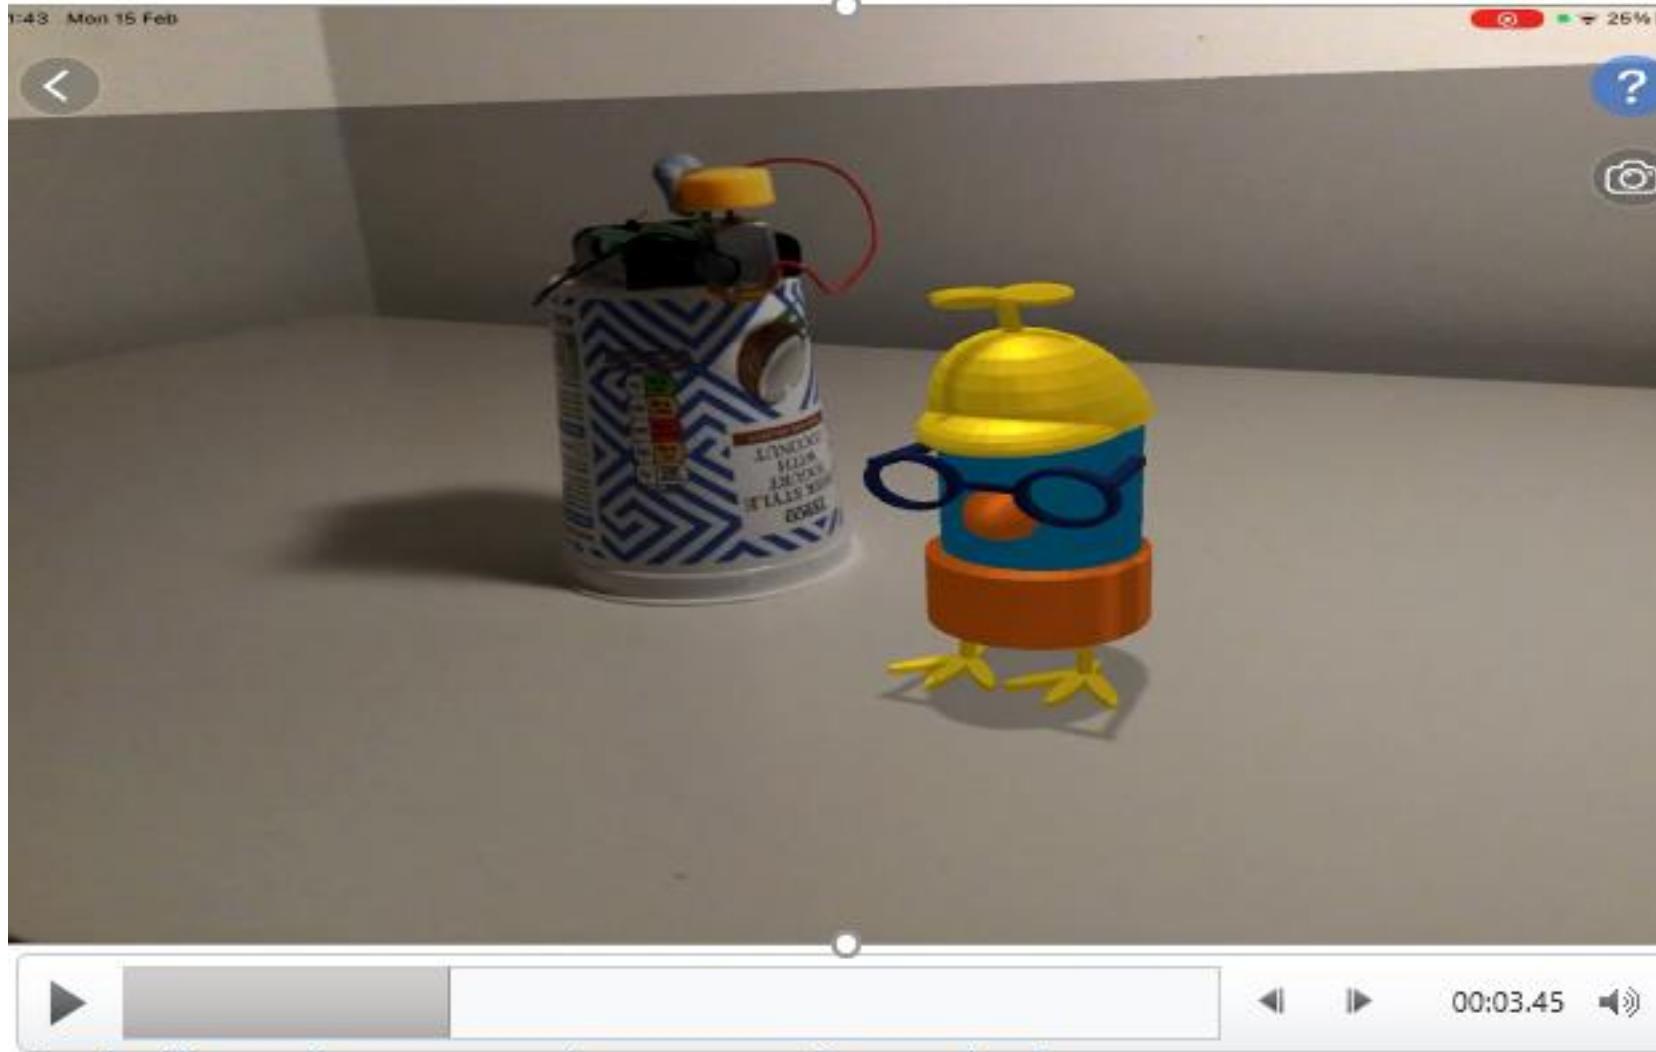

```
1 int PotPIN = 0;
2
3 void setup()
4 {
5   pinMode(A0, INPUT);
6   pinMode(13, OUTPUT);
7 }
8
9 void loop()
10 {
11   PotPIN = analogRead(A0);
12   digitalWrite(13, HIGH);
13   delay(PotPIN); // Wait for PotPIN millisecond(s)
14   digitalWrite(13, LOW);
15   delay(PotPIN); // Wait for PotPIN millisecond(s)
16 }
```

Questions.....

Questions Responses

 **EMERGENT** Training 17th-19th February  
Belfast 2021

Dear EMERGENT partners,

Thank you for your attendance and participation. The workshops presented an individual perspective of the STEM subjects in the context of Gender, Subject Content, Project-Based Learning and Problem Solving. They highlighted some of challenges of STEM Education in the classroom and raised awareness of the importance of the coordination of STEM subjects.

It is appreciated that not every aspect of the workshop will be directly relevant to each partner. But just as with the STING toolkit, it is hoped each partner will take out of it what is relevant to them.

As part of the EMERGENT European project, we are evaluating our training activities and we would like to have your personal reflection and feedback. Your answers are very important to us, as they will help us improve our workshops and create guides and teaching materials that respond to your needs.

This survey will take you around 10 minutes to answer. The data will be analysed only for evaluation/research purposes.

Thanks in advance for your participation.

The EMERGENT team

Section 1

**Goals of the Workshop:**  
Evaluate the goals of the workshops were addressed on a scale of 1-5  
5: Strongly agree 4: Agree 3: Neither agree nor disagree 2: Disagree 1: Strongly disagree  
Explain your responses with some further details

1. Broaden perception of STEM

1 2 3 4 5

2. Broaden perception of STEM- please explain your rating with some further details
